Next is information about me

My education

I study at New Uzbekistan University as a software engineering student from 2022 to 2026. I am senior student this year. (final year :))

My skills are:

- Python (Django, DRF, python-telegram-bot, JWT authorization, Djoser)
- JavaScript (React.js)
- SQL (PostgreSQL, sqlite)
- GitHub, Railway(server for deployment), Gunicorn
- And of course working with a team.

My projects are:

- **SAT Mock Website** | *January 2025 - now*: active website (copy of Bluebook by CollegeBoard) used for taking mocks on SAT test. I developed both frontend(React.js) and backend(DRF). The backend stores the user data, which test was solved, each question and so on, also handling score calculation and other tasks. Link to website: satislomxon.uz
- **Telegram Bots** | *August 2024 - now*: I developed multiple bots for specific tasks, including automation for online education and course management.

  One is used for solving math tests in telegram and bot checks the answers submitted by user.; Other is used for registering to mocks we hold(using the website explained previously).

Languages

- English (Fluent)
- Uzbek (Native)
- Russian (Proficient)
